Tectonic Hackathon

Congratulations! Across 7 cities, more than 800 people participated in the Tectonic Hackathon, you are one of the 32 lucky teams that now has the opportunity to pitch your solution in front of our esteemed partners and have the chance to win €10.000, powered by Spott

This document will provide you with more details on the challenges, using the technical partners and how to submit. Good luck!

Table of contents

1. Timeline & practical information
2. Submission & judging
3. Wifi
4. Challenge
    a. KBC
    b. SD Worx
5. Technical partners
    a. Aikido
    b. Eleven Labs
    c. Cursor
    d. Google Cloud
6. Rules & Fair Play

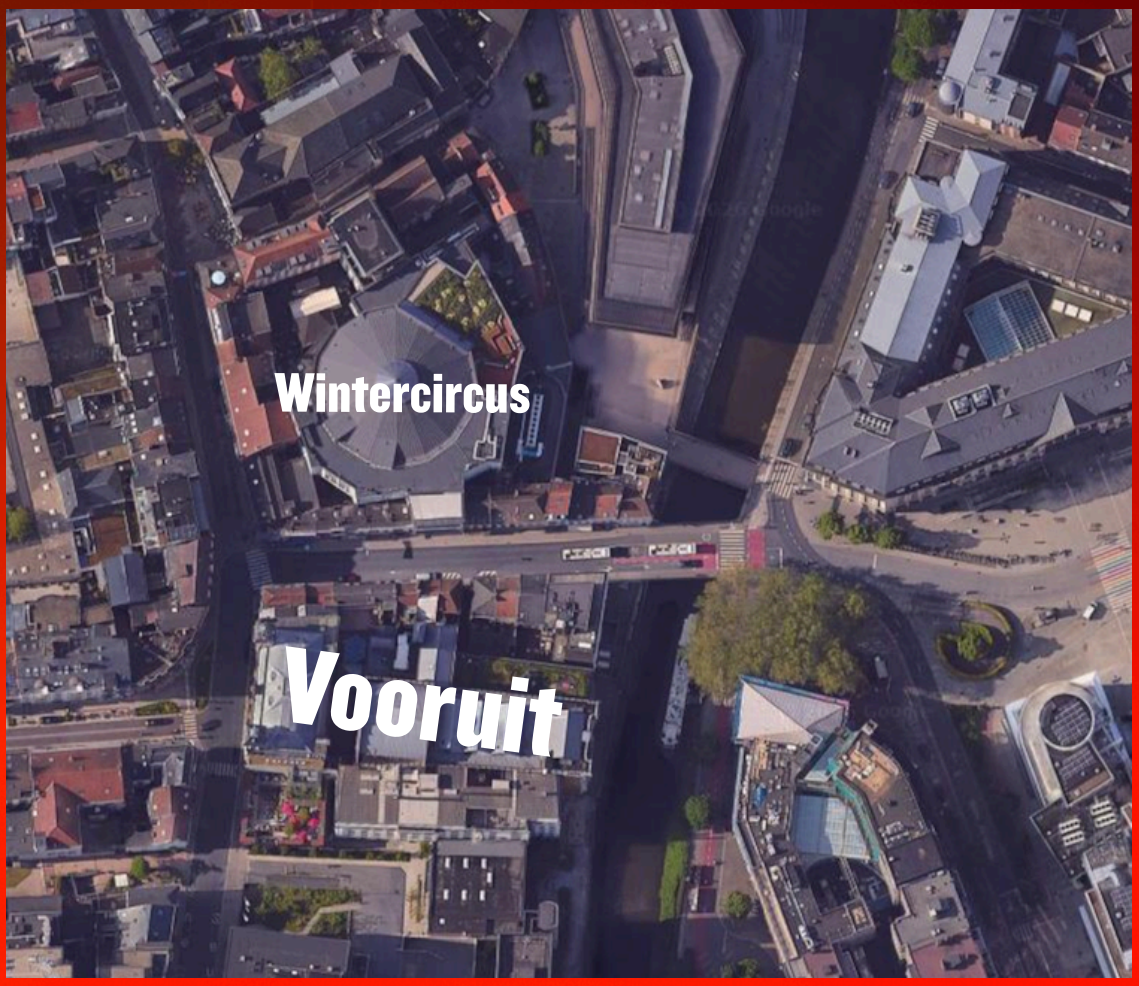
Timeline & practical info

Below is the timeline and practical info for the day. Read it carefully

We start in Vooruit, do the semi-finals in Wintercircus and end back in Vooruit for the finals. After a busy day, there is a small reception with food in Wintercircus again.

Time	Programme	Where
08:00–08:40	Arrival and breakfast	Vooruit Concertzaal
08:40–09:00	Welcome by partners	Vooruit Concertzaal
09:00–16:00	Hacking; lunch at 12:30	Vooruit Concertzaal
16:00	Submissions close	Vooruit Concertzaal
16:15–17:35	Semi-final pitches	Wintercircus
18:00–18:10	Start finals in Vooruit	Vooruit Theaterzaal
18:10–18:15	KBC winner announced	Vooruit Theaterzaal
18:15–18:25	KBC finalist pitch	Vooruit Theaterzaal
18:25–18:30	SD Worx winner announced	Vooruit Theaterzaal
18:30–18:40	SD Worx finalist pitch	Vooruit Theaterzaal
18:40–19:00	Wonderful's pitch	Vooruit Theaterzaal
19:00–19:10	Winner is announced	Vooruit Theaterzaal
19:10–19:20	Closing	Vooruit Theaterzaal
19:20–21:00	Reception	Club Wintercircus
21:15	Tecnotonic party	Wintercircus

The finals are split across Wintercircus and Vooruit (where you are right now). They are both connected with a bridge. Please follow the Tectonic staff during the transition towards the pitches at 16h.



Similar to last time, you will work on solving a challenge. However, this time you can leverage the staff of our partners to ask questions & feedback. Use them wisely!

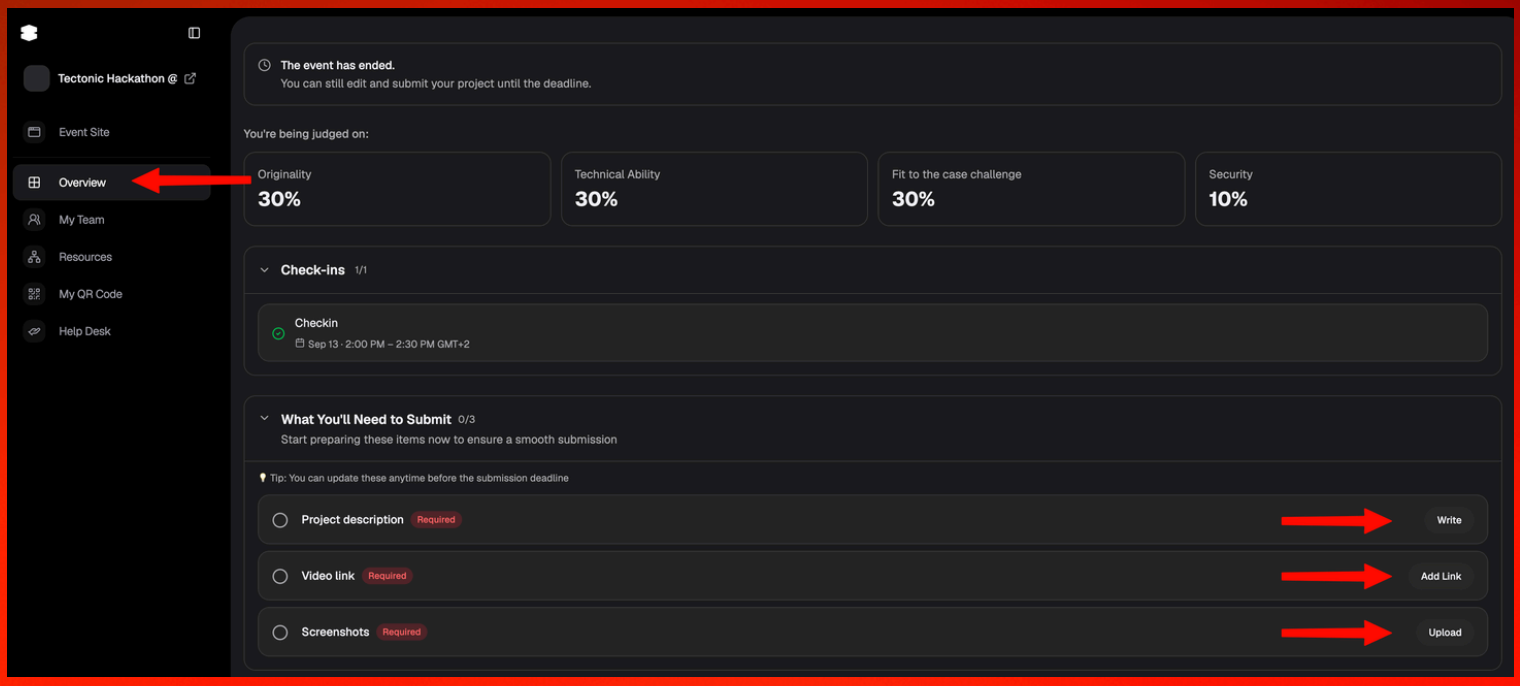
Also different is the judging. This will now be in person, with a 3-minute pitch and 5 minutes for questions. We have limited buffer and we will be strict on time for your pitches. You will not use your own device, so be clever how to present your demo.

Below are the timeslots for the jury pitches across the four rooms. Be there 10 minutes before your slot starts and ask for help when looking for your room.

Time	Room 1 (KBC)	Room 2 (KBC)	Room 3 (SD Worx)	Room 4 (SD Worx)
16:15 - 16:25	Code Blooded	Les perdus	Aleida.ai	Pack Overflow
16:25 - 16:35	Code Monkeys	Madame Soleil	Algoholics	ProstoPizdetz
16:35 - 16:45	Copal	Olympus	Arno, Rune & Aeon	SkepTech
16:45 - 16:55	Ctrl+Vibe	Prompt & Pray	CDN	Sssst... hier hackt den AI
16:55 - 17:05	Dynamate	RIGA	GenHomies	Team 2
17:05 - 17:15	If/Else	SmashVision x SuperiorSwarm	Les Flammand	Tekst
17:15 - 17:25	In4matics	Watari	Maze Runners	The Four Loops
17:25 - 17:35	KEN	Whatever	OpStudio	Vulcan Kinetics

Submission & judging

Submissions are done through the Builderbase platform. One of your team members logs in and collects the data and fills in the fields under overview. You will need to write a **short description**, make a **pitch presentation (<3 minutes)**, give **Github repo link** and give **screenshots of the Aikido platform**.



Our judges will score you on:

1. **Creativity:** how original is your idea? (25%)
2. **Technical ability:** does it work? (20%)
3. **Fit:** did you solve the challenge? (20%)
4. **Pitch quality:** how well did you present? (25%)
5. **Security:** how secure is it? (10%)

KBC Challenge

The opportunity

Customers often have to recognise a need, compare options and coordinate multiple providers themselves. KBC wants to become a trusted partner that understands intent, anticipates needs and connects the right services and partners to help customers achieve meaningful life or business outcomes.

The Challenge

Design a scalable ecosystem that helps customers move from intent to successful action.

Your solution should	Design principles
Recognise signals of an emerging need, ambition, opportunity or challenge.	Bold and differentiated, not a minor product improvement.
Understand the customer context behind that intent.	Personalised and adaptive, yet scalable to millions of customers.
Activate relevant KBC capabilities, channels, expertise and ecosystem partners.	Trustworthy, transparent and privacy-conscious.
Guide decisions and actions while keeping the customer in control.	Commercially viable for KBC and attractive for participating partners.
Deliver a measurable outcome and a sustainable triple win for customers, KBC and partners.	Grounded in a believable customer journey and demonstrated through a proof of concept.

Building blocks and scope
Use KBC's banking, insurance, platforms, data, AI, advisory capabilities and ecosystem partnerships as building blocks. You may combine existing capabilities, connect multiple domains, introduce new partners or imagine new capabilities.

Possible domains (be bold): Energy & sustainability, entrepreneurship & business growth, and travel.

GUIDING QUESTION
How can KBC help customers achieve important life and business goals before they realise they need help?

ONE MORE CHALLENGE

Can your solution stay trusted without becoming another task?

You started with one challenge:
How might we turn fragmented organisational knowledge into a trusted shared resource?
Now take your solution one step further.

Knowledge changes. People change roles. Expertise evolves. Context gets lost.

How can your solution stay **useful, reliable and up to date** without asking people to constantly document, update or maintain it?

Your extra challenge

Keep it trusted. Make it transparent.
Think invisible UI, calm technology and frictionless experiences:

- Automate what can reasonably happen in the background
- Verify when human judgement adds real value
- Minimise unnecessary effort and attention
- Integrate naturally into existing ways of working
- Make it understandable when people need to know, decide or act

The technology should be almost invisible when things work and clear when people need to understand or act.

Think beyond documents
Sometimes the most useful answer is not in a document. It is knowing:

- Who has dealt with this before?
- Who really knows this customer or topic?
- Who knows how this actually works here?
- Who knows why we do things this way?

For example
You are a new developer at SD Worx.
You can look up how a build pipeline works. The harder questions are:
"How do we do this here?", "Who should I talk to?"

You need to launch a marketing campaign.
The harder questions might be:
"Who has done this before?","Who understands this audience?", "Who knows what actually worked?"

Could your solution learn from signals already created through everyday work, instead of requiring employees to maintain another knowledge system?
These examples are inspiration, not requirements. Solve the underlying problem.

Show us how

Ask yourselves:

1. What happens automatically?
2. When is human verification genuinely valuable?
3. How do you prevent maintenance from becoming a burden?
4. How does your solution fit naturally into the user's workflow?
5. How does your solution remain understandable without demanding constant attention?

The goal is not zero human involvement. The goal is zero unnecessary effort.

Find it. Understand it. Trust it. Keep it trusted. Make it transparent. Make it effortless.

© 2026 SD Worx — ***Build something bold. Make trust sustainable.***

Aikido

We are proud to partner with Aikido, the leading software security company . As part of the finals, your submission will need to have a security audit by Aikido. It will again weigh **10% of your submission assessment**. Need help - Aikido is onsite to support you!

1. Prepare your project repository

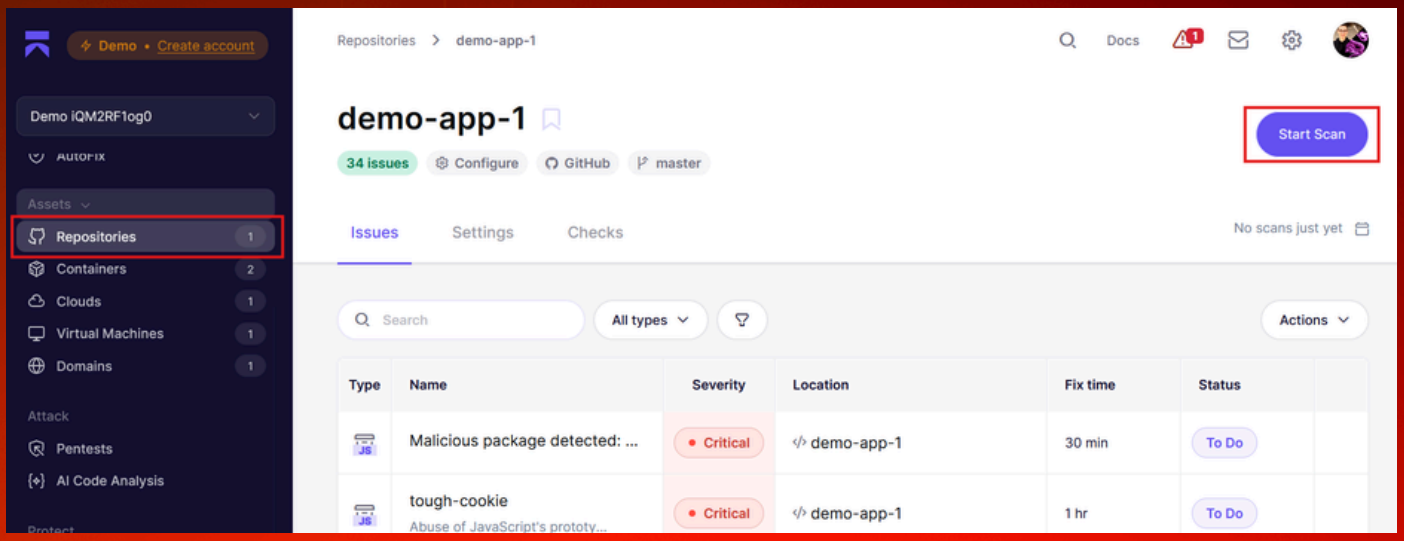
Put your hackathon project in a GitHub repository. Make sure your latest project code is committed and pushed.
You must use the same project you are building for the hackathon. Unrelated projects, existing projects submitted as your own, or deliberately trivial projects created solely for this challenge are not eligible.

2. Create a free Aikido account

Go to app.aikido.dev and create a free account using GitHub. Follow the onboarding steps to set up your Aikido workspace.

3. Connect your repository

Authorize Aikido to access your hackathon repository and select it for scanning. Once the initial scan is complete, open the findings in your dashboard.



4. Review and fix vulnerabilities

Review the vulnerabilities, their severity, and the remediation guidance in Aikido. Implement fixes to improve your score, then commit and push your updated code.
Start early to leave time for fixes and a completed scan of your latest code before the submission deadline.

5. Submit your results
By 16h, submit the following via Builderbase:

- Link to your GitHub repository.
- Screenshots of your final Aikido scan results, showing the repository name and remaining vulnerabilities.

ElevenLabs

ElevenLabs is an audio artificial intelligence company that turns written text into realistic, human-like speech and synthetic voices

How to get your credits

1. Join the Discord server: discord.com/invite/VnBvbbcdEC
2. Gain access to the # | coupon-codes channel
3. Click "Start Redemption"
4. Select the event and fill out the form using the email used for registration
5. The bot sends the unique coupon code.

Cursor

Cursor is your coding agent for building ambitious software.

How to get your credits

1. Join the Discord server:

https://discord.gg/5UwpfTF7M

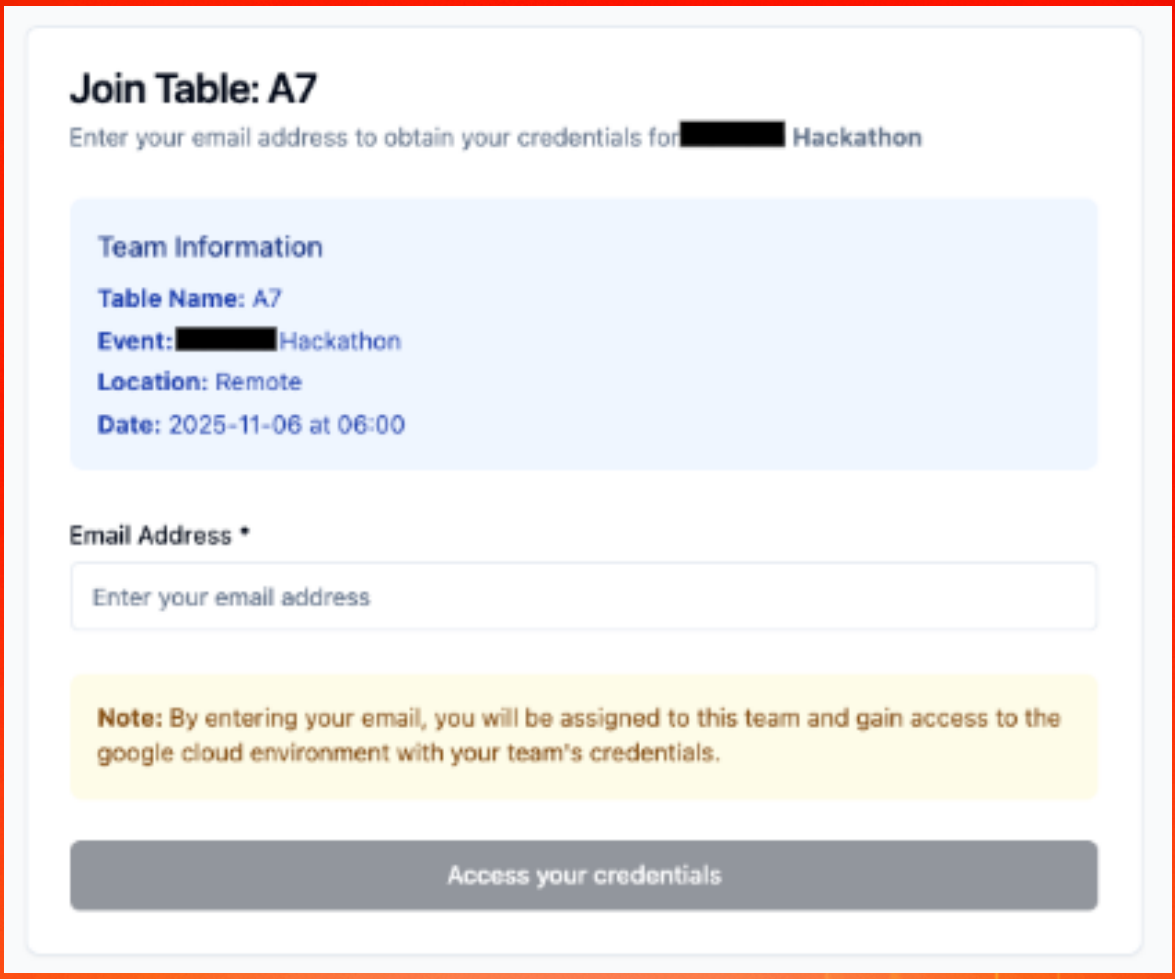
2. Gain access to the #coupon-codes channel
3. Click ´Start Redemption´
4. Select the event and fill out the form using the email used for registration
5. The bots sends the unique coupon code.

Google Cloud

Google Cloud is a suite of cloud computing services that runs on the same global infrastructure used by Google for products like Google Search and YouTube.

How to get started

1. Copy the link, you find in Builderbase for your team. In case you only have a code use goo.gle/<your-code> in your browser
2. On the link, enter your email to find your GCP credentials. They are valid for 1 week only.



Rules & Fair Play

- **Build within the time limit.** Your project must be built during the official hackathon time slot.
- **Submit on time.** Submit one project per team through the official platform, with all required links.
- **Final means final.** No code changes or submission edits after your final submission. Judges assess that version.
- **Keep your GitHub repository public** and accessible until judging is complete.
- **Include a short README.** Explain your project, how to run it and anything unfinished.
- **Check your links.** Judges must be able to access your repository and other submitted materials. Pitch presentations are ppt or pdf!
- **Work as a team.** Collaborate with your registered teammates and take shared responsibility for your project.
- **Protect private information.** Never upload passwords, API keys or confidential data.
- **Respect everyone.** Harassment, discrimination, plagiarism and cheating are not acceptable.
- **Follow the organisers' instructions.** Judges' decisions are final. Rule violations may lead to disqualification.
